SUMMARY

Staff software engineer with 11 years of experience building distributed backend and ML platforms.

EXPERIENCE

Staff Engineer, Machine Learning Platform, Larkspur Commerce (fictional), 2021 - Present

- Lead a team of 9 engineers building the feature store and model-serving platform used by 40 ML models.
- Designed a Kubernetes-based model serving layer on AWS EKS handling 25,000 requests per second at p99 under 80 ms.
- Introduced an LLM-powered product search using retrieval-augmented generation over 3 million product descriptions.
- Mentor 6 engineers and run the backend architecture review board.

Senior Backend Engineer, Orchid Telecom (fictional), 2017 - 2021

- Built Python and Go microservices for billing, migrating a monolith to 14 services with zero downtime.
- Owned PostgreSQL schema design and query tuning; cut the monthly billing job from 9 hours to 40 minutes.
- Set up CI/CD with GitLab CI and Terraform for 30 services.

Software Engineer, Mapleleaf Systems (fictional), 2014 - 2017

- Developed REST APIs in Django and Flask; wrote unit and integration tests with pytest.

SKILLS

Python, Go, SQL, PostgreSQL, Redis, Kafka, Kubernetes, Docker, AWS, Terraform, FastAPI, Django, scikit-learn, PyTorch, system design, technical leadership

EDUCATION

MS Computer Science, Ravi University of Engineering (fictional), 2014

BS Computer Science, Ravi University of Engineering (fictional), 2012
